

MEMORANDUM

June 26, 2024

TO: Reclamation District No. 2028

FROM: Nathan Hershey, Brian Janowiak

SUBJECT: June 2024 Engineer's Report

Described below are the engineering items to be discussed at your June 26, 2024 meeting.

Subventions 2023-24 – The District submitted an application for participation in the Program in the amount of \$541,000. A total of \$13 million has been approved by the Central Valley Flood Protection Board for the Program for FY 2023-24.

Subventions 2024-25 – The District submitted an application for participation in the Program in the amount of \$541,000. DWR will be requesting authorization for a total of \$14 million for the Program.

Future Subventions Funding – DWR has indicated that funding has not been secured yet for fiscal years 2025-26 and beyond. Delta advocates, including the California Central Valley Flood Control Association and others, are considering ways to increase awareness and gain support for securing funding for this highly successful and vital program. We have prepared a draft funding request letter for the RD to consider and possibly submit to state legislators.

Annual Maintenance – Attached are the current maintenance items we are tracking.

Emergency Response Grant (Round 3) – San Joaquin County transmitted a memo to reclamation districts regarding grant funds that are available to update the District's emergency operations plan and flood contingency map. Up to \$15,000 per district is available. Our recommendation is to participate in the process and use this funding to update the documents.

FEMA – The District's claim is currently under review at FEMA. MBK will continue to check in with FEMA personnel regarding status updates. The total claim amount is \$52,398.36.

Special Projects – The enhancement component of the Old River multi-benefit levee rehabilitation project (BN-15-1-SP) is in-progress. Maintenance activities will be on-going to promote plant health and longevity.

Teichert is currently placing fill along the north levee (BN-19-1-SP). PG&E has scheduled the utility pole replacement work to begin in early July. Stillwater continues to coordinate with CDFW regarding environmental restrictions. Coordination with San Joaquin County and Mandeville Island regarding county road impacts is ongoing. Work is scheduled to be complete by the end of the year.

SB 88 – All Phase 4 meters have been installed and certified by MBK Engineers. Data is currently being collected at 37 sites across all four islands. MBK will continue to monitor all sites monthly during the winter season and weekly during the irrigation season via Wildeye's website. All Wildeye units are currently working with the exception of Bouldin Island Siphon No. 30, which was damaged by driftwood (equipment

RD 2028
Engineer's Report

June 26, 2024
Page 2

will be reinstalled when Phase 5 installations occur at nearby siphons). All meters are currently working, with the exception of Bouldin Island Siphon No. 2, which stopped functioning due to water damage (a new complimentary meter was provided by Technoflo and will be replaced during the Phase 5 installation).

All Phase 5 flow meters were delivered and inventoried January 4th on Bacon Island. MWD is preparing a bid package and will be requesting bids in the near future for meter installations. The Phase 5 telemetry equipment has been purchased, and will be delivered at the time of installation, following flow meter installations at each site.

On May 22nd, MBK and MWD attended the Delta Consortium and presented preliminary findings on the comparison of OpenET vs measured siphon diversions on the Delta Islands. As a result of this presentation additional analysis is being completed and added to the summary technical report on the 2023 OpenET and measured diversion comparison.

MBK attended the Delta Drought Response Pilot Program (DDRPP) Forum on June 20th. At this forum the results of the 2023 DDRPP were presented and discussed. The Delta Conservancy will be posting the final report for the 2023 DDRPP on their website in July 2024. The Delta Conservancy also confirmed a 2024 DDRPP will not be occurring.

RD 2028 - Bacon Island

Issue Tracking Summary June 21, 2024

120.1		February 22, 2024 1:00 AM	Nate Hershey					Investigations indicate the water is coming from the field side. A trench was excavated in the field, and the direction of flow was coming from the field (flowing west to east). Recommend sandbagging around the boil to manage the pressure. When conditions permit, next steps are to excavate an exploratory trench east of the toe ditch to see if there is flow is coming through the levee. If so, an exploratory trench in the levee crown is recommended.
